# Outsourcing

**Onsite contract consultant/worker/projects:**  
In this model Spinnovation is acting as a staff providing firm and ensures that high skilled professionals are deployed on the client's premises. This delivery model is appropriate if high flexibility is required in a project, if there is a need for a specific resource type or if post-deployment support is essential.

## Onsite-offshore project

This model offers a combination of the two approaches mentioned above. The vast majority of work is still carried on Spinnovation's premises, thereby maintaining a significant cost advantage. But some members of our team can be located on the premises of our client, enabling them to more easily deal with project management, clients' needs and within a much shorter reaction time. This approach is more focused on managing communication as well as risk and is well suited to delivering more complex services in comparison to the pure offshore project model.

Spinnovation being committed to make difference to its customer's ROI by effectively leveraging **local talent** has invested heavily in international knowledge & competency buildup; passing on the **cost benefits** that the region offers.

## Offshore project:

In this model, all of the project consultants and workers are working in Spinnovation's premises. The offshore project model is suitable in scenarios where the project goals are well defined and deviation from the same is unlikely. The offshore model is the most cost effective one

**As DynamicsPeople we are now capable of meeting your resource needs globally**
